History AutoCAD was initially designed by Cal-Carver, Inc. in 1982 for its Calcar NC-100 machine. In 1992, the software was licensed to a new company named Autodesk. In the early years of the 21st century, Autodesk acquired privately held software company The Eagle Group, which included the Maya (formerly Encore) 3D software product. AutoCAD revolutionized the CAD world by introducing CAD software directly to a desktop workstation, supporting graphic tablet input in addition to mouse and keyboard input. AutoCAD takes advantage of the graphics processing unit (GPU) of the central processing unit (CPU) to speed up rendering, while still maintaining the CAD look and feel. AutoCAD for OS/2 The first AutoCAD release for IBM PCs was the "AutoCAD for OS/2" product released in 1985. Prior to that time, AutoCAD was considered for its mainframe-only roots. It had been developed for use on the Honeywell ASG (Advanced Scientific Graphical) operating system, and lacked many of the features that modern CAD programs would demand. AutoCAD for OS/2 was developed by Microsoft and sold by a small company named Cal-Carver, Inc., which later became Autodesk. The release in 1985 had three components: the Windows version that was to be sold separately (AutoCAD for OS/2, Windows), the main program (AutoCAD), and the optional development tools. It was a full-featured commercial CAD program with construction geometry, very good 2D drafting, and 3D parts modeling tools. It had the ability to edit and manipulate 3D drawings with unlimited undo, an important feature at the time. AutoCAD for OS/2 was the first CAD application available for the PC platform. The developers stated that there was a 90% chance the user would find what they needed in less than 5 minutes. The product debuted at the 1985 Comdex Show, where AutoCAD for OS/2 won an award for Best of Show. AutoCAD for OS/2 won several awards, including Best of Show at Comdex 1985, Best of Show at the 1985 European Inventor Show, Best of Show at the 1986 Eurodesk, Best of Show at the 1987 Annual R.L. Polk Awards, and Best of Show at the 1989 European Design Awards. Although the main program AutoCAD

I have a music player app for Android (if that matters at all), and I'm trying to figure out how to be notified whenever a button is clicked on the app. I have a listview with artists, and they have buttons below. I need to be notified of every button click, regardless of which artist/artist's button is clicked. How can I go about this? I've heard of global broadcast receivers, but I'm unsure how to use them. Any thoughts/advice would be greatly appreciated. A: Something like this: public class BaseActivity extends Activity implements OnClickListener { ListView mListView; @Override protected void onCreate(Bundle savedInstanceState) { super.onCreate(savedInstanceState); setContentView(R.layout.base_layout); mListView = (ListView) findViewById(R.id.list); mListView.setAdapter(new ListAdapter(this));

There's a lot of history and a lot of promise for AutoCAD 2023. (Remember that Autodesk previously updated AutoCAD several times every year. This product is making a big leap forward.) Remember this video for a taste of what Autodesk is trying to accomplish in 2023. Autodesk, now a $12.5B company, has grown into a dominant force in the drafting software industry. Although the company has had a strong history of producing software for CAD and other fields, Autodesk has brought substantial technology to the drafting community over the last two years. I'm always impressed when I visit Autodesk's booth at conferences or visit their website. In fact, I just received a copy of AutoCAD 2023 in a cool new box. Before I get into details of what Autodesk's showing at the CAD/CAM conference in Chicago, let's take a look at what Autodesk's AutoCAD is all about. As many CAD users know, it's hard to talk about CAD without talking about AutoCAD. The product was originally designed as a package for engineering companies. It is widely known as the drafting software of choice for architects, engineers, and other professionals in these fields. A Brief History of CAD (Computer-Aided Drafting) In the 1980's, AutoCAD was the first of its kind. The CAD revolution has been surprisingly gradual. CAD programs today are designed to be cheap and powerful. The first CAD programs were typically expensive desktop applications with only a few features. CAD was primarily designed to be used in engineering and architecture firms. These applications were used
