I have a table of invoice items that I'm trying to clean up: What I want is a formula that will get me a boolean result, true if the invoice items are not blank (i.e. not Null or the empty string). So far I've gotten to this: Non-Blank Invoice Items: [Descendant, 'Invoice Item'] = FIRSTNONBLANK(//Invoice Items/Invoice Item[not(ISBLANK(.Data))]) I'm open to the possibility of adding a "Return Values as text" to the pivot table (via a calculated column), or an alternative method. Any thoughts? A: The first thing I'd try to avoid is using not(ISBLANK(..), in this case you're trying to get ALL NONSBLANK values so it's not what you want. That would be something like: [Descendant, 'Invoice Item'] = FIRSTNONBLANK(//Invoice Items/Invoice Item[not(ISBLANK(.Data))]) That will get you all non-blank Invoice Item entries, so you'd need to then filter down to those that have Data (which I assume is intended to be the start of the invoice item) non-blank. The following would then be a little cleaner: [Descendant, 'Invoice Item'] = FIRSTNONBLANK(//Invoice Items[Data][not(ISBLANK(Data))]) Keep in mind that at the basic level this is a DISTINCT function. If you wanted to be more specific and just get unique invoice items you can use: [Descendant, 'Invoice Item'] = DISTINCTNONBLANK(//Invoice Items[Data][not(ISBLANK(Data))]) Keep in mind that with this simple logic, 0cc13bf012

Bloodsport (1988) 480p Hdrrip X264 Aac Dual Audio{eng-hindi} [eng, 9Â .Q: Property of a product of two invertible elements in a ring. Let A be a ring and let $a, b \in A$. Let R be the set of all the positive integers such that $a^n + b^n = 0$, for some $n \in R$. Let $S = aR \cap bR$. Suppose $a, b \in A$ are invertible. Is S always a subring of A ? Suppose $n \in R$, so that $a^n = -b^n$. Let $m \in S$. Then, $(a^n + b^n)m = 0$, so that $(a^n + b^n)m = 0$ implies that $(a^n)m = -(b^n)m$ and $(b^n)m = -(a^n)m$. Therefore, $am = -bm = -bm'$ and $mb = -am = -am'$, where $m' = m$. So, S is a subring of A . My original question is: if I can prove that, for any $n, m \in S$, $nm = 0$, then this will show that S is a subring of A . A: There is no need to verify commutativity of multiplication. We only need $0 \in S$ (as this is a subring) and S is closed under multiplication. It's also obvious that we don't need to verify associativity, $0^0=1$ can be simply assumed. If $a^n + b^n = 0$, then $b^n - a^n = -(a^n + b^n) \in S$. If $ab=0$ and $a, b \in S$, then $0 = 0a = 0b = (a+b)0 = (a+$
