# TrayURL Free Registration Code For Windows [Latest] 2022

[Download](#)

## TrayURL Crack + Download

TrayURL is a portable bookmark manager that can be used on the go to quickly access your favorite websites. It all happens in the System Tray, with an icon that provides access to the saved websites, but also to the settings screen. Although it doesn't offer browser integration or at least an importing tool to easily insert new bookmarks, adding a new website to the database is as easy as pie. Just pick a category, enter a description, provide a URL and you're ready to go. If your website needs authentication, that's not a problem at all, as TrayURL provides separate fields for username and passwords too. Categories can be managed from the "URL Settings" screen and you are allowed to add, edit or delete categories, but also to add, edit, delete, copy and move entries from one category to another. More settings are however available in a dedicated screen and this is the only place where you can configure the default browser, but also menu size limits. The latter option gives you the option to limit menus to a defined number of categories and URL entries, and this is quite an important feature given the fact that it all comes down to a System Tray menu. As you can see, TrayURL lacks many important features, although we all agree that a portable bookmark manager can come in very handy to many users out there. So, as a conclusion, it's worth mentioning that TrayURL clearly does its job, but we have to admit that future improvements are still needed. Browser integration and maybe some bookmark importing features could come in very handy. Finally, we have to note that TrayURL is an open-source project and you can easily compile the latest version

---

of the application and read its source code on GitHub. The best thing is that it should be easy to add features to TrayURL using user contributions and one can hope that it won't be long before TrayURL offers more functionalities than the ones it already provides. The best thing is that it should be easy to add features to TrayURL using user contributions and one can hope that it won't be long before TrayURL offers more functionalities than the ones it already provides. Comment of the day I'm thrilled to show off some cool stuff I've been working on. It's basically an extension of what I have up there, but it's a bit more

## **TrayURL Crack + Torrent (Activation Code)**
