Photoshop is a bit more complex than Paint Shop Pro, so if you're familiar with Paint Shop Pro, you'll probably have to brush up on Photoshop. Table 3-2 provides tips for using Photoshop. Table 3-2 Tips for Using Photoshop Tip | Description --- | --- **Customize interface and work comfortably** | There are three ways to customize the Photoshop interface: Customize the workspace. You can move, resize, and shape the workspace, or move or resize your layers. You can also drag the toolbars to position them where you want them. You can also change the size of the workspace. (See the section "Moving Around," later in this chapter, for how to work with and customize the workspace.) Customize the workspace to suit your own preferences.

To do this, right-click on the workspace and choose Preferences. You then select which parts of the workspace you want to customize. You can also move the toolbars and resize the workspace. Customize the workspace in your PSD. Photoshop has a powerful program-wide workspace-preference system that enables you to alter the entire workspace. When you create a workspace preset and save it as a.psd file, that preset's settings are the default settings for a new workspace, so you can change the size, arrangement, and tools of the workspace just by moving a few buttons. For more information, see the "Customizing workspaces" sidebar later in this chapter. **Simplify your Photoshop experience** | Although you can use Photoshop as a powerful production tool, in many ways it's much easier to use a feature-rich program like Photoshop than to rely on the new features in Photoshop CC. Photoshop doesn't have all the functionality that Adobe Lightroom has, so if you plan to do a lot of image work, you might want to consider Lightroom. Lightroom or Photoshop

CC is more powerful than Photoshop CS6 or earlier. However, Photoshop is still the most powerful photo editing tool available. You can add new features with the Photoshop CC Adobe Creative Cloud subscription program, but you can't add features with other software, including Lightroom. If you decide to use Photoshop CC as your primary photo editing program, consider picking up Lightroom as well. They work together very well, and if you have a subscription to Adobe Creative Cloud, you can use them together. See the "Running a Lightroom" sidebar later in this chapter for details on how

for the interchange. In many cases, a temporary sign will be placed while permanent changes are made. Rates Businesses or non-residential property owners pay rates to secure the roadway they use, and these rates apply regardless of how many people will drive on that roadway. The amount of the rate per kilometre, per vehicle per year, or per person can be determined by the roadway's class. The type of non-residential rates may be either on a flat rate basis or a volume rate basis. The reason for this varies between jurisdictions. Businesses may prefer to pay for the roadway on a flat rate basis, as this may be part of a leasing arrangement. Non-residential owners will pay on a volume rate because they will use a greater amount of road per time and have a larger number of vehicles. The cost of maintaining the roadway, road reserves, drainage and other infrastructure on the roadway, should the roadway be built to a standard different than originally intended, will also be considered. This cost of making the roadway usable to the public, with proper lane divisions, signage, pavement, etc. should be factored into the cost of construction. Construction cost may be taken into consideration in determining the rates. It should be noted that this may result in an increase or decrease in the rates. Construction Construction of a roadway is when the roadway and its associated components are built. This may include the clearing of vegetation from the right-of-way, the clearing of the roadway or channel, hauling and compacting of the road base, and the laying of the initial base, seal coat and final overlay. During construction of a roadway, businesses or non-residential property owners may have the right of access to the right-of-way of the roadway and its associated components. This may be a temporary right of access, or it could be considered an easement of access. It may also be considered a lease of access. The lease of access could be limited to the construction period, may be for a certain amount of time or could be open-ended. In addition to right of access, construction may also provide for the posting of safety features such as traffic barrels, guardrails and delineators. Definitions U.S. Environmental Protection Agency.
