The DVD-ROM drive in a Toshiba laptop doesn't support the disc brake feature.

Toshiba DVD-ROM SD-C Device Driver - TOSHIBA TECRA M3 Series Information. Windows 8 will turn on, but not the printer, mouse or anything else. I'm only familiar with windows 8 and windows 7, and I'm hoping someone can help me with this as I'm struggling to find other solutions. The device is a Toshiba SCM-N333, and works fine in Windows 8 (the one I am in) on a different computer. I have recently tried to install a DVD-ROM to the computer, and Windows will not recognize it. I have unplugged it, plugged it back in, restarted, and nothing. I have tried checking the hardware tab in device manager, and checked the driver status to see if there were updates to the driver, which there were not. I have also tried to update the driver manually, which will show the Toshiba SCM-N333, but it won't update, or else it is unable to connect to the internet. I would appreciate it if someone could take a quick look and tell me if it is an issue with the DVD-ROM or if it is an issue with Windows. Thanks, and sorry for the length of this post. A: It looks like the built in DVD Drive on your Toshiba Satellite is no longer supported by Microsoft, so they've removed the corresponding entry from the list of drives that Windows reports it supports. I've struggled with the same problem in the past. In my case, I was able to fix the problem by putting a DVD drive in the same half-height bay as the one that had stopped working (a Dell DVD drive that I still use for other purposes). Then when I start up the computer, I hold down the Shift key as I start Windows, and then the system lists all the drives, including the one I'm using for the DVD drive, then I let go of Shift. In the case of your Toshiba DVD drive, it's possible that it will work if you put it into the same half-height bay. You don't mention if you have a half-height bay that you can use. Interaction between spleen tyrosine kinase, guanine nucleotide exchange factors, and platelet-specific phospholipase C gamma 1 regulates phosphorylation and activation of protein kinase C theta in platelets. Phospholipase C (
